

Maintenance Memorandum

Date: December 19, 1986

Subject: Disposal of Used Motor Oil

Disposal of used motor oil is regulated as a liquid industrial waste and needs to be disposed of accordingly. Handle any used oil at garages as follows:

1. Make sure the used oil is being properly stored. Most garages have above ground tanks which are preferred.
2. Do not dump any solvents or cleaning materials in the used oil storage tank. Keep all different types of waste separated.
3. When the tank is nearly full, contact the contracting disposal agency to haul the used oil. Make sure that they haul to an appropriate recycling facility.
4. Any waste oil shipped must be manifested using the Hazardous Waste Manifest and copies of the manifest needs to be filed in the waste book.

If you have any questions, please contact the Maintenance Environmental Compliance Engineer at (517)322-3301 or your Region Resource Specialist.
